1. EXECUTIVE SUMMARY

As far as Clean Up Britain can establish (and we have looked extensively) there has never been a quantitative research survey of this scale done before about portable ashtrays in Britain. It has been a large-scale survey with commensurate levels of statistical reliability about the results.

We will come onto the results shortly, but we do believe that Philip Morris International now has a blueprint - if it wanted to - for designing the ‘perfect’ ashtray. As will become apparent, this was a survey with a very high level of positive engagement. We can say that with certainty because 319 people out of a possible 415 (77%), took time to write something in a voluntary question, with no automatic tick-box option. This is a very, very large figure and, arguably, the best indicator that respondents were genuinely engaged in the research. Anecdotally, on-the-ground, we felt this to be the case, but this statistic appears to confirm this view.

In addition, another figure that jumps off the page is that the average score (out of 10) which people gave when asked how likely they were to continue using a portable ashtray, was 6.9. This is also remarkably high and an additional positive indicator of strong and accepting sentiments towards the concept of portable ashtrays.

One of the firm findings to emerge from the research is that the market for portable ashtrays is particularly strong among women. Although this assertion does rely on reassuring female consumers on two key points: namely that portable ashtrays won’t spill ash into a handbag; and there won’t be an enduring tobacco smell.

Assessing the two pieces of research together (qualitative and quantitative), there are two very strong themes. Firstly, that a majority of smokers are open to the concept of using a portable ashtray (albeit in different circumstances). Secondly, there is very considerable room for design innovation and improvement on the style of portable ashtrays currently on the market.

In truth, there is little in the way of quality: the vast majority are cheaply made and look and feel low-end and unappealing products. They are functional, but no more. PMI has a wonderful opportunity to create and capture the portable ashtray market, if the will exists within the company?
2. RESEARCH METHODOLOGY

2.2. Topline Facts & Figures:

Between November 19th, 2019 and January 15th, 2020, Clean Up Britain got 2,784 survey forms filled-in by face-to-face engagement to adults who told us they were smokers. This was done in Leamington Spa and on the main campus at the University of Warwick, in the West Midlands of England.

Ultimately, this generated 520 online surveys - and yielded a completion ratio of 1: 5.35 - significantly in excess of our planned for 1: 8. Principally, this was done at 11 major locations, by a rotating team of 12 people. There was always at least two people on the Clean Up Britain Stand.

On average, we got 4-6 completed forms per hour, and it took 1,100+ person-hours, over an eight-week period, to achieve the final result.

2.3. Accumulating the survey data

The process of accumulating the data was as follows:

Random members of the public were approached by one of our Team. If they said they smoked, we asked them to take part in the research survey and complete a ‘standard consent form’ we had produced.
We also produced a printed information flyer which was a useful ‘marketing’ tool and given to people, partly as a physical reminder to fill-in the online survey. We then gave them one of four of the portable ashtrays to try out. Which portable ashtray they got was determined by us, not them. We then emailed them between 3-10 days later with a link to the online survey.
The text of the ‘follow-up’ email was as follows:

Hi Amber,

Many thanks for agreeing to complete a very short survey about portable ashtrays. It should take about two minutes to complete. Your response will be entirely anonymous.

Take the Clean Up Britain portable ashtray survey

After you have completed the survey you’ll have a chance to win £1,000 worth of cash prizes, and an anonymous benefactor will also donate £3.00 - on your behalf - to the Leamington Night Shelter, who helps the homeless.

We’re a not-for-profit NGO, and it’s really important for us to get your feedback, as we have only been able to afford to buy a limited number of these ashtrays.

The results of the survey will help us to combat cigarette litter, and keep your local area cleaner and greener. Thanks again for taking part in this very important piece of research.

All the best,
John (Read), Founder
www.cleanupbritain.org

A central database was kept of everyone who received an ashtray, and the date(s) they were emailed to complete the online survey, and if and when they clicked on the survey link. Many people didn’t complete the link first time and needed chasing up with a subsequent email.

The text of the ‘chase up’ email was as follows:

Hi Amber,

Happy New Year!

Can I just remind you to fill-in this 2 minute online survey below please.

You’ll have a chance to win one of 11 cash prizes up to £500 and - once you’ve filled it in - an anonymous benefactor will donate £3, on your behalf, to a homeless charity, The Leamington Night Shelter.

Many thanks.

John

It was noticeable that ‘chase-up’ emails sent between 7.00pm-10.00pm prompted the best instant response rate.
2.4. Design of the Online Survey

The online survey was designed, coded and analysed by Ben Verinder, one of Clean Up Britain’s non-executive directors and Managing Director of leading British market research company, Chalkstream Ltd. It was tested on several occasions to remove bugs and was very straightforward to understand and, literally, only took two minutes to complete.

The survey was programmed to only allow a unique IP computer number to complete the survey once, and therefore eliminate multiple entries. At the end of the survey respondents were asked to click on a link to the Clean Up Britain website to insert their name and email address, so they could be entered into the prize draw. We deliberately did this to preserve the anonymity of all respondents.

Click on the link below to see the online survey.

2.5. Distribution points

We distributed the portable ashtrays at 11 locations, often on more than one occasion. These were:

- University of Warwick Students Union (x3 occasions)
- Warwick Business School x1
- Tesco supermarket (x2)
- Morrison’s supermarket (x2)
- Warwickshire Further Education (FE) College (x3)
- Network Rail (Leamington Spa railway station) (x1)
- Royal Priors Shopping Centre (x2)
- Leamington Town Hall (x1)
- Leamington Library (x1)
- Slimming World Town Group (2)
- Leamington Spa Business Forum (x1)

In addition, four independent cafes also took part as distribution points.
2.6. The portable ashtrays we researched

After having conducted the qualitative research we decided to choose four portable ashtrays to test quantitively. These were:

A. ‘Cigbuster’ - manufactured in Sweden, with an international patent. This portable ashtray had tested very well during the qualitative research, and has certain product features that make it attractive. One of the main ones being that uniquely among the ashtrays available on the market, it is not only a portable ashtray, but has a built-in lighter too.  
   **Cost: £8.00**

B. Metal cylinder - this portable ashtray had also researched well in the qualitative groups, mainly because it is compact, feels substantial (metal) and can be attached to a clutch of keys.  
   **Cost: £11.00**

C. Mini Bin ‘pouch’ - this portable ashtray is a very different proposition to all the other three and, to some limited extent, has established itself on the market, and is given-away free at summer festivals and concerts.  
   **Cost: £2.00**

D. ‘Butts Out’ pod - this portable ashtray was not available during the quantitative stage of the research, but we are aware that it had had a successful trial in London.  
   **Cost: 99p**

Note: A=blue, C=white etc. For D, note that this was considered as a “proxy” for plastic containers used in the focus groups.
3. **KEY LEARNINGS**

3.2. **Curiosity about the project**

It was very noticeable during the many hours/days of conducting the research, that lots of people were curious about what we were doing, and indeed many had never heard of the concept/term ‘portable ashtrays’. It’s fair to say that most people thought ‘portable ashtrays’ were a great idea - whether they were smokers or not. Whether that curiosity and instinctive reaction would be borne out into active usage and endorsement of the product was always the key question.

3.3. **Anonymous Benefactor**

We decided to introduce the concept of an anonymous benefactor donating £3 (to a homeless charity) for every online survey completed, and this had a profound effect - especially amongst women. We observed that people appeared to be much more driven to complete the survey by the thought of the homeless definitely getting £3, rather than the possibility of them winning a cash prize. Our team stressed that they only had to spend two minutes of their time for a homeless person to get two nights’ sleep in a homeless shelter - this undoubtedly pricked a lot of consciences… We think we were helped by the fact that it was Xmas time and people, generally, perhaps feel more compassionate and caring for others. This is a hypothesis that we haven’t statistically proved but feels intuitively valid.

3.4. **Challenges to survey completion**

- **Generating large numbers**

We knew that in order to generate such large respondent numbers, we had to engage in places where there were very likely to be large numbers of people congregating. Young smoking people were the easiest to identify and find in large groups through educational establishments. In this respect, three of Clean Up Britain’s campaign partners, Warwick Business School, Warwick Students Union and Warwickshire FE College, were all very helpful and allowed us to set-up our Stand on their campuses.
• Permissions

However, one of the things that was very time-consuming was arranging permission to undertake the research with the organisations outlined in section 2.5. Inevitably, some were easier to deal with than others but, cumulatively, it took quite a considerable amount of time to negotiate permissions and was, sometimes, a very bureaucratic process. They were, however, all supportive partly, we suspect, because Clean Up Britain is a not-for-profit Community Interest Company. Their reaction is likely to have been somewhat different if it had been a commercial company asking for permission, and they would - in some cases - have levied an exhibit fee.

• Time Elapse

As was always likely to be the case, the biggest challenge for us was to persuade smokers who filled-in the standard consent form, to fill-in the online survey. This involved anything from a three day to ten day elapse of time before they got the link, via email, from us. The rationale behind this was to allow them time to sample the portable ashtrays and give us a considered response to the online survey questions. The problem, of course, is that in the intervening days many other things happen in their lives, and the initial enthusiasm (and often promises) to fill-in the online survey, somewhat evaporated. Like all of us, they are likely to receive many emails, and the email we sent them with the survey link, only stays on the front page of their email page for a limited period before it disappears from sight. It’s difficult to know how this can be overcome - other than sending more pestering emails, which is what we did!
• Demographic profile

With only about one in seven of the adult population smoking in the UK, most people we spoke to didn’t smoke - although this figure varied according to where we were located. The number was considerably higher when speaking to young people and students. We found it quite surprising just how many students told us they were vaping - although some said the recent negative media coverage of vaping was making them consider returning to smoking cigarettes. We tended to encounter a much older demographic at the two supermarkets. Often, we spoke to customers who were smokers, but didn’t have an email address.

3.5. Clean Up Britain Partners

Seven of Clean Up Britain’s campaign partners actively helped us with this research project - this was crucial to us achieving our numbers. Warwick Students Union, for instance, have 25,000 members and helped us significantly by ‘sign-posting’ people towards us on the days we were on campus, by using their various social media channels. Interestingly, as many as 70 of the survey respondents were international students, mainly from France, Italy and Spain.
3.6. Local media coverage

The local newspaper, The Leamington Courier, was, as always, very supportive and ran two helpful articles that generated some spontaneous interest in the town. As a result, 27 people emailed us saying they had read one of the articles and asking to take part in the survey. Of these, 19 of them, ultimately, filled in the online survey.

These were the articles:

**THE COURIER**

Smokers in Leamington and Warwick could win £500 and help a charity by using free portable ashtrays

Smokers in Leamington and Warwick are being offered the chance to win £500 and to help a charity for homeless people by using portable ashtrays issued by the anti-litter campaign Clean Up Britain.

As part of its Now or Never anti-litter behavioural change campaign in Leamington, Clean Up Britain is offering all smokers a free portable ashtray and asking them to fill in a two minute online survey to give their views about it.

Everyone who fills in the form will be eligible for the Prize Draw, consisting of one prize of £500 and another ten prizes of £50 each.

In addition, for every online survey completed by Courier readers, an anonymous benefactor will donate £3 to the Leamington Night Shelter.

John Read, Founder of Clean Up Britain, said: “A shocking 24 Billion cigarette butts are littered every year in Britain, making them the number 1 littered item in the world.

“These butts are toxic, contain cellulose acetate - a form of plastic - and pollute rivers and other water sources.

**THE COURIER**

Portable ashtray giveaway as part of anti-litter campaign in Leamington

Thousands of portable ashtrays are being offered for free to smokers as part of Clean Up Britain’s Now or Never anti-litter campaign in Leamington.

As part of the campaign, for which the Leamington Courier is a partner, Clean Up Britain wants to find out how we cut down on cigarette litter by raising awareness of the issue and encouraging more people to use the portable ashtrays as part of the solution.

John Read, of Clean Up Britain, said: Very few people in Britain currently use portable ashtrays, but in Japan, for instance, 95 per cent of smokers use them.

*Britain and Japan are probably at two ends of the spectrum.*

*Many people don’t realise, but cigarettes are single-use plastic items, as they contain cellulose acetate, a form of plastic.

There are 35 Billion sold in Britain every year, and the UN estimates that 70 per cent of these are littered.*
3.7. Team delivering this research/report

As mentioned earlier, we had 12 people who managed to generate the completion of 2,784 survey forms, three of these people were - in corporate terms - director level, and two middle managers. The others were all junior executives. In addition, Andy Harrop, consulting for PMI in the UK, played an extremely helpful and highly supportive role to Clean Up Britain.

It’s true to say that - perhaps unlike most consultancies would have done - this project/report has been delivered hands-on, at all stages, by senior campaigning, media, behavioural science and market research executives.
4. **FINDINGS & ANALYSIS**

4.2. **Topline Findings of the Research**

- 2,784 portable ashtrays were distributed
- 520 online questionnaires were data-captured
- 46% of surveyed smokers have smoked between 1-5 years
- 64% of surveyed smokers were 18-24 years old
- 25.5% of surveyed smokers were 25-54 years old
- Male to Female ratio was well balanced; with females likely to have smoked longer than males
- Colour of ashtrays was important - females chose the white or orange ashtrays, males green and blue ashtrays. There were concerns about white becoming dirty looking. A decent colour range would be required.
- Just over 50% of smokers used the ashtray at least two or three - or more - times in a week
- Female smokers were more likely to use the ashtray compared to their male counterparts - the average likelihood was 7.3 compared to 6.5 out of 10.
- White and blue ashtrays were used more than the orange one (note the functionality of the ashtray vs the design and colour might account for this)
- Younger smokers and female smokers more likely to use the ashtrays than older smokers, or smokers who had smoked over many years
- Over half of all smokers said they would continue to use their ashtrays
- The design/functionality of the ashtrays was a key factor in continued use ie. size, inclusion of a lighter, ability to stub lighted cigarette out on it, ability to clean it. The clip on the cheeky ‘Butts Out’ portable ashtray was liked by younger people.
- As was apparent from the qualitative research, the design/functionality of the ashtrays could be improved, with concerns of ‘smell-proofing’ it in some way being a common suggestion, including colour and size
- Over 58% of surveyed smokers believed ashtrays should cost between £1 and £5
- Most - 87% of those surveyed - smokers expected to buy the ashtrays via a retailer
- The five main reasons why smokers might not use an ashtray were in descending order of importance:

  1. smell
  2. spillage
  3. emptying and cleaning
  4. unsustainable material of ashtray
  5. price

- 41% of surveyed smokers admitted to “often” or “always” dropping butts on the ground. Those aged 45 and over are most likely to rarely or never litter, and men are more likely to litter cigarette butts than women - 59.2% of men said they often/always drop cigarette butts, compared to only 33.2% of women.
4.3. Analysis

Over 500 people responded to the invitation to participate in the online survey after having received a portable ashtray to test and, of these, 415 completed the questionnaire in full.

It is considered that respondents adequately represent the broader population of smokers in terms of length of time they have smoked, age and gender. Respondents in this study have, on average, smoked for significantly fewer years than the Focus Group attendees.

Ashtrays were purchased and distributed in the following numbers:

<table>
<thead>
<tr>

</tbody>
</table>

Each user was encouraged, through personal-gain incentivisation, (by getting a free portable ashtray and entry into a prize draw), to complete an online survey following a period of use by first filling in their details manually on a leaflet and giving their consent to be contacted later to fill-in an online questionnaire. However, it was very evident that many people were driven to complete the online questionnaire because of the ‘social conscience carrot’ we dangled: namely, that an anonymous benefactor would donate £3 - on their behalf - to a homeless charity.

The target for completed online survey questionnaire responses was 500. An ambitious figure but, we believed, attainable. The online survey questionnaire (see Appendix A) complemented the results of the three Focus Groups conducted by Clean Up Britain earlier in 2019. Questionnaire topics included:

- Demographics
- Regularity of use
- Favourability
- Features - positive and negative
- Recommended changes

As is common with all online surveys, there was a drop-off rate (during the completion of the survey), and at 8.8% this was about the industry norm.

83% of all respondents expected their ashtray to be free or less than £5. However, this reluctance to pay a great deal may be more to do with the (lack of) quality of products they were presented with, than any fundamental price resistance. This is a product most respondents didn’t even know existed, so there is likely to be an innate ‘why do I need this’ reaction, which mitigates against a willingness to pay much. Perhaps the same might have been said about bottled water before it was heavily marketed - and water is an essential commodity… the same can’t, of course, be said for portable ashtrays.
5. SEGMENTED RESULTS

5.2. Respondents

A total of 520 people responded to the invitation to complete the questionnaire, with 415 fully completing the survey (Table 1). 38 of those were automatically disqualified because they indicated they couldn’t remember having an ashtray/or were not given an ashtray (Table 2).

Among respondents who had been given an ashtray, almost half have smoked for between one and five years (Table 3). On average, the respondents in this study have smoked for far fewer years than the Focus Group attendees, and it is worth bearing this difference in mind when comparing results.

As at Table 4, two thirds of respondents are aged 18 to 24, with 45 to 54-year-olds and 25 to 34-year-olds representing the next largest age groups. Respondents are split fairly evenly between males and females (Table 5). As at Figure 1, female respondents are marginally more likely to be long term (21+ years) or shorter term (5 years or less) smokers than males.

Figure 3: Distributed ashtray by age range

Respondent base: 437
5.4. Using the ashtray

Respondents were next asked how frequently they had used the ashtray that they had been given, and the results are set out in Table 7. Half of respondents had used it two or three times a week or more. A third had used it a few times and a tenth just once. 33 respondents (8%) couldn’t remember how often they had used it.

In terms of frequency of use according to which ashtray had been received, those who had been given the white and blue ashtrays were most likely to use it two or three times a week at least, and those who had received the orange ashtray were least likely to use it frequently (Table 8).

Figure 4 illustrates the relationship between frequency of ashtray use and years smoked. Longer term smokers were most likely to be infrequent users of the ashtrays.

Correspondingly, as at Figure 5, the over-55s were also likely to be the least frequent users. Females were marginally more likely to use the ashtray at least once a day than males, but marginally less likely to use it two or three times a week. Males were more likely to have used the ashtray just once (Figure 6).

5.5. Likelihood of continuing use

Respondents were next asked: “On a scale of 0 to 10, with 10 being highly likely, how likely is it that you will continue to use the portable ashtray you were given?”

The results are set out in Table 9 below. Half of all respondents rated their likelihood at 8 or above. On average, respondents rated their likelihood at 6.9, with answers ranging from 0 to 10 (a standard deviation of 2.7 all told, as set out in Table 10).

White and orange ashtray users are most likely to continue to use their ashtray, according to the results published in Table 11. Those who had smoked for between 11 to 15 years, 1 to 5 years and over 21 years are most likely to continue using their ashtray and those who had smoked between 6 and 10 years least likely (Table 12).

In terms of age, 45 to 54-year-olds are most likely to continue to use their ashtray, according to Table 13 results. Those aged 25 to 34 are least likely. Females are more likely than males to say they will continue to use the ashtray (Table 14).

5.6. Views of ashtrays

Respondents were asked what they liked about the ashtray they were given to test and encouraged to leave the space blank ‘if there was nothing you liked about it’. 319 respondents provided an answer to this question, with the results set out below in Table 15. Overall, respondents most liked the size, ease of use and design of the ashtrays they were given to test\(^1\). Full set of responses is outlined in Appendix B.

What respondents like about the ashtrays, according to which ashtray they tested, is set out in Table 16. Recipients of the white ashtray particularly liked its size. Recipients of the blue ashtray were positive about the inclusion of a lighter. Those who received the green ashtray were most positive about size, colour and the clip feature. Those who were given the orange ashtray most liked its size, convenience, design and environmental credentials\(^2\).

Respondents were then asked what they wanted to change about the ashtrays they were given and, again, they were encouraged to leave the answer blank if there was nothing they would wish to change. Only 78 respondents did provide an answer and the largest group of these took pains to say there was nothing they would change (despite instructions). Otherwise, respondents are most likely to want to change the colour, size, design or smell-proofing capacity of the ashtray they were given (Table 17).

In terms of what respondents would like to change about the ashtrays (as at Table 18), those who were given the white ashtrays are most likely to want to change its colour\(^3\), to make it bigger or change the design (in this case, to want to personalise it). Recipients of the orange ashtray are most likely to want to change its colour or make it bigger. Those who were given the green ashtray to test are most likely to want to make it bigger, and those who received the blue ashtray to make it smaller.

\(^{1}\) Where respondents cited the ‘environment’ they either referred to the ashtray’s sustainability in terms of product design or to its role in protecting the environment per se.

\(^{2}\) The orange ‘butt’ ashtray received a number of compliments about its ‘cheeky’ design.

\(^{3}\) This white ashtray received a range of different comments about the ease with which the white surface became dirty.

5.7. Cost

Just over half of all respondents think that the ashtray they were given should be priced at between £1 and £5 (Table 19). Only eight respondents (2%) think their ashtray should cost more than £11. A sixth of respondents feel their ashtrays should be priced at less than £1 or at between £5 and £10.

Recipients of the orange ashtray are most likely to think it should be priced between £0 (i.e. be free) and £5. Recipients of the blue ashtray are most likely to consider their ashtray should cost £5 or more.

Those who have smoked for the least amount of time are most likely to expect a portable ashtray (like the one they tested) to be free. Those who have smoked for the most time are most likely to think it should cost over £5 (Figure 7). As at Figure 8, cost expectations are spread fairly evenly across age groups; those who think ashtrays should cost more than £11 are restricted to the 18 to 24-year-old group. Males are more likely to expect their ashtray to be free and females more likely to think it should be priced in the £1 to £5 bracket (Figure 9).

5.8. Portable ashtrays in general

The next section of the questionnaire focused on the use of portable ashtrays in general. Firstly, respondents were asked where they would expect to buy a portable ashtray and the most common responses were ‘at the cigarette counter of any shop or supermarket’ (87% of respondents said this, as at Table 21) or ‘online’ (44% of respondents).

Responses according to the length of time someone had smoked are set out in Figure 10. Responses are fairly evenly distributed - respondents who had smoked for longer are marginally more likely than those who have smoked for less time to expect to buy an ashtray at a cigarette counter, in a supermarket or online. Unsurprisingly, given these results, older smokers are also typically more likely to expect to buy an ashtray at a cigarette counter, in a supermarket or online (Figure 11).

Male respondents are slightly more likely to expect to buy portable ashtrays online (Figure 12) while female respondents are more likely to expect to buy them in a gift shop or household aisle of a supermarket.

Figure 10: Where respondents would expect to buy a portable ashtray by years smoked

Respondent base: 417

Figure 11: Where respondents would expect to buy a portable ashtray by age group

Respondent base: 417
Respondents were then asked where they would be most likely to use a portable ashtray like the one that they were given to test. As at Table 22, the five most popular situations are (in order):

1. Where there is difficulty in finding or using a public ashtray
2. At the house of a friend who does not smoke
3. Where there was a threat of a fine due to littering
4. At bus stops
5. In the countryside/walking the dog

Overall respondents can envisage themselves using an ashtray across a wide range of situations.

The longer the time someone has smoked, the more likely they are to expect to use an ashtray where there is difficulty in finding or using a public ashtray (Figure 13). Those who have smoked for the least time are most likely to expect to use an ashtray at a bus stop.

In terms of situations of use by age group (Figure 14), younger smokers are most likely to expect to use an ashtray where there is a threat of a fine, at the house of a friend who does not smoke or where there is difficulty in finding or using a public ashtray. The eldest group most expects to use these kinds of ashtrays outside a train station, at bus stops or (again) where there is difficulty finding an ashtray.

Females are more likely than males to expect to use a portable ashtray in all situations except where there is a threat of a fine (Figure 15).

5.10. Discouraging factors

Respondents were next asked what might put them off using a portable ashtray and results are set out in Table 23. The five top factors that might put someone off are, according to these results:

- The smell
- The risk it might spill
- Emptying and cleaning the ashtray
- If it is not made from sustainable materials
- Price

Those who have smoked for between 6 and 15 years are most likely to be put off by the need to empty and clean the ashtray and the risk of spillage (Figure 16).

Correspondingly, respondents aged 25 to 34 are as concerned by the need to clean and empty the ashtray as they are by the smell (Figure 17). Those aged 35 to 44 are most concerned by the smell and risk of spillage, which may be a reflection of the fact that this age group are more likely to have young children at home. The over 64s are most concerned by the prospect of spillage and the fact that an ashtray may not be safe to use. Those aged 40 to 45 are most put off by the potential smell, the task of emptying and the price.

In terms of gender differences (Figure 18), men are more likely to be put off by the smell and risk of spillage than women, while women are more likely to be put off by the price, the task of cleaning and if it was not made from sustainable materials.

5.11. Littering

Finally, respondents were asked about their littering habits – specifically how often, if ever, they litter cigarette butts. One fifth of all respondents (Table 24) always drop their cigarette butt on the ground and a further fifth litter cigarette butts often. Only one tenth of respondents never litter butts, according to these results.

Those that have smoked for the longest are least likely to litter butts and those that have smoked for the least time are most likely (Figure 19). Correspondingly, the younger the respondent, the most likely they are to litter butts (Figure 20). Those aged 45 and over are most likely to rarely or never litter.

Men are more likely to litter cigarette butts than women, as per Figure 21.

6. COMPARISONS BETWEEN QUAL & QUANT RESEARCH

Overall, respondents were positive about the ashtrays they tested - in both the quantitative and qualitative research. Typically, smokers that used these ashtrays think they are likely to continue to do so. Half of respondents rate their likelihood of future use at 8 or more (on a scale of 0 to 10) and the average across all respondents is 6.9. There are some marginal differences in terms of likelihood of continued use between types of smokers; females are more likely than males to say they will continue to use the ashtray, for instance.

Where respondents made positive comments about their ashtray, they were most likely to cite the size, ease of use and design aesthetic of the ashtrays they were given to test. A significant proportion of respondents praised their ashtrays for helping them reduce the amount of butts they littered.

Compliments tended to depend on the nature of the ashtray and trends in results are not dissimilar from those of the Focus Groups, where participants were positive about size, safety, and specific design features such as the inclusion of a lighter, suitability for a car or hook/clip feature.

When respondents were asked about what they didn’t like about the ashtray, their answers, again, corresponded with the types of comments made by Focus Group attendees. Smokers are most likely to want to change the colour, size, design or smell-proofing capacity of the ashtray they were given.

Again, suggestions for changes did differ according to ashtray.

As another indication of how generally positive respondents are about their ashtray, far more positive comments were made about ashtrays than negative ones.

Typically, respondents think the ashtrays they were given should be priced at between £1 to £5. Price expectations differ according to smoker type and ashtray received.

Respondents most commonly expect to buy portable ashtrays at cigarette counters or online. The differences in where respondents expect to buy (and use) them may be influenced by the places those respondents expect themselves to be.

Overall, smokers can envisage themselves using a portable ashtray in a wide range of situations, according to these results.

The five most popular situations in which a respondent would expect to use a portable ashtray are:

1. Where there is difficulty in finding or using a public ashtray
2. At the house of a friend who does not smoke
3. Where there was a threat of a fine due to littering
4. At bus stops
5. In the countryside/walking the dog
There are some notable differences between these results and those produced by the Focus Groups. In particular, this study illustrates how males are more likely to be spurred to use an ashtray by the threat of a fine than females. Such results have implications for the marketing and promotion of portable ashtrays, as do the responses to the question about what might put respondents off using an ashtray. As in the Focus Groups, the risks of smell and spillage are most likely to deter respondents from using a portable ashtray.

Those aged 35 to 44 are most concerned by the smell and risk of spillage, which may be a reflection of the fact that this age group are relatively more likely to have young children at home than other groups.

There are notable gender differences in terms of what might deter someone from using an ashtray - men are more likely to be put off by the smell and risk of spillage than women, while women are more likely to be put off by the price, the task of cleaning and ashtrays made from unsustainable materials. (Correspondingly, women are more likely to value environmental sustainability as a positive feature).

Again, as with the Focus Group responses, littering of cigarette butts is common. In both studies around a third of respondents often or always drop their butts on the ground. As with litter in general, young males are the most likely to litter cigarette butts.
7. WHAT NOW? NEXT STEPS

7.2. Digest - then decide

Clearly, PMI needs to digest this research and consider if - and where - it fits into the company’s strategic priorities. Portable ashtrays will not completely rid the world of carelessly discarded cigarette butt litter, but it could certainly move the dial. In reality, there is no tangible market (supply or demand) for portable ashtrays (in Britain at least). It was evident from our numerous conversations, most people in this country had very little, or more likely no, awareness of the concept. Those smokers who were aware of portable ashtrays, were mostly young people who had been given a free Mini Bin pouch at a music festival.

7.3. Responding to - or leading - public policy pressure?

Very few people surveyed throughout the qualitative and quantitative research were aware that cigarettes contain plastic. Growing awareness of this - combined with the realisation that many butts end up in watercourses and potentially causing pollution - will probably build increasing pressure on PMI to be seen to be doing something to alleviate this environmental pollution. This is an opportunity to get ahead of the public policy and public opinion curve, and build a market leadership position.

7.4. Innovation & Commercialisation

The range of portable ashtrays available on the market consists of poorly designed, cheaply manufactured and uninspiring products. Our research has given very clear indicators as to what consumers would be looking for - although this varies slightly according to gender and age. PMI could, undoubtedly, produce a well-designed and stylishly manufactured portable ashtray, that was both desirable and highly functional - as a working name, the ‘Portable Ash Pod’ perhaps. It would require some R&D budget, but it could be a new tobacco market segment that, with first-mover advantage, PMI could ‘own’. It could have significant PR, CSR and public policy benefits. This could be leveraged even more by setting up an Environmental Trust with the explicit objective of reducing cigarette butt litter, and educating smokers about the environmental damage inflicted by them. All proceeds (after running costs) would be donated by PMI to The Trust.
7.5. **Education, Enforcement & Civic Pride Partnership**

One of Clean Up Britain’s Partners is Kingdom’s business unit ‘Local Authority Support’ (LAS), Britain’s leading environmental enforcement company.  
https://www.kingdom.co.uk/services/local-authority-support/

They work for about 40 Councils - enforcing the law against littering - in England, including the largest Council in Europe, Birmingham City Council.  
In 2022, Birmingham will be hosting the Commonwealth Games, and the Council is very keen to clean up the city in advance of anticipated enormous media coverage around the Games, with 70+ countries taking part. About 85% of the littering fines given out by LAS are for cigarette butt littering. PMI could consider launching an education and enforcement campaign with a local authority, e.g. Birmingham City Council, which - as one part of it - could involve PMI providing thousands of ashtrays for LAS to giveaway free to every smoker caught littering? Clean Up Britain could help with sourcing ashtrays economically, for example the “butts out” ashtray for around 20p each. This would offer PMI a high-profile opportunity to showcase its CSR credentials and work with Europe’s largest Council.

7.6. **Do nothing**

PMI has commissioned this research, and it has yielded some very clear and, arguably, compelling results. Will the Report gather dust, or will the company act on it…? Over to you!

*Clean Up Britain has very much enjoyed working on this research project, and many thanks for giving us the opportunity. We have put a tremendous amount of effort and application into the work, and we hope it shows - and most importantly, provides valuable insights and actionable results for Philip Morris International.*
8. APPENDICES

Appendix A: Questionnaire

CLUB portable ashtray survey

Introduction

Just to check
Page exit logic: Skip / Disqualify Logic IF: #1 Question "Were you given a free portable ashtray to test?" is one of the following answers ("No","Don’t know") THEN: Jump to page 12 - Thank you
Flag response as complete

1) Were you given a free portable ashtray to test?*
   ( ) Yes
   ( ) No
   ( ) Don’t know

About You

Page exit logic: Skip / Disqualify Logic IF: #2 Question "For how many years have you smoked?" is one of the following answers ("I don’t smoke") THEN: Jump to page 12 - Thank you

2) For how many years have you smoked?
   ( ) Less than 1 year
   ( ) 1 to 5 years
   ( ) 6 to 10 years
   ( ) 11 to 15 years
   ( ) 16 to 20 years
   ( ) 21 years or more
   ( ) Don’t remember
   ( ) I don’t smoke

More about you

3) What is your age?
   ( ) 18 to 24
   ( ) 25 to 34
   ( ) 35 to 44
   ( ) 45 to 54
   ( ) 55 to 64
   ( ) Over 64
4) What is your gender?
( ) Male
( ) Female
( ) Other
( ) Prefer not to say

**The portable ashtray**

5) Which portable ashtray were you given to test?
( ) The green metal portable ashtray with a clip-on key ring
( ) The white portable ashtray pouch
( ) The orange ‘Butts Out’ portable ashtray
( ) The blue combined lighter and ‘Cigbuster’ portable ashtray

**Using the ashtray**

6) How frequently have you used the portable ashtray that was given to you?
( ) At least once a day
( ) Two or three times a week
( ) A few times
( ) Once
( ) Don’t know

7) On a scale of 0 to 10, with 10 being highly likely, how likely is it that you will continue to use the portable ashtray you were given?
( ) 0  ( ) 1  ( ) 2  ( ) 3  ( ) 4  ( ) 5  ( ) 6  ( ) 7  ( ) 8  ( ) 9  ( ) 10  ( ) Don’t know

**What you like/want to change**

8) What do you like about the ashtray you were given to test?
Please leave blank if there was nothing you liked about it.

____________________________________________
____________________________________________
____________________________________________

9) What would you change about the ashtray you were given to test?
Please leave blank if there was nothing you would change.

____________________________________________
____________________________________________
____________________________________________
**Buying a portable ashtray**

10) How much would you expect a portable ashtray of the kind you tested to cost?

( ) I’d expect it to be free
( ) Less than £1
( ) £1 to £5
( ) £5 to £10
( ) £11 to £15
( ) Over £15

11) If you were going to buy a portable ashtray, where would you expect to buy it? Please select all that apply.

[ ] At the cigarette counter of any shop or supermarket
[ ] In a gift shop
[ ] In the ‘household’ aisle of a supermarket
[ ] From a specially designed vending-machine
[ ] Online
[ ] Somewhere else - please provide details: ________________________________________________

**Where you would use a portable ashtray**

12) In which situations might you be most likely to use a portable ashtray? Please select all that apply.

[ ] Where there was a threat of a fine due to littering
[ ] At the house of a friend who does not smoke
[ ] At work
[ ] Outside a train station
[ ] In the garden
[ ] At bus stops
[ ] At a festival, gig or concert
[ ] For small journeys
[ ] Where there is difficulty in finding or using a public ashtray
[ ] Something else (please provide details): ________________________________________________
[ ] Don’t know

**What might put you off**

13) What might put you off using a portable ashtray? Please select all that apply.

[ ] The smell
[ ] The risk it might spill
[ ] It identifies me as a smoker
[ ] It might not be safe to use
[ ] Emptying and cleaning the ashtray
[ ] Size (too small or too big)
[ ] Price
[ ] The way it looks/Poor design
[ ] If it is not made from sustainable materials
[ ] Something else (please provide details): ________________________________________________
[ ] Don’t know
And finally - littering

Page exit logic: Skip / Disqualify Logic

IF: #1 Question “Were you given a free portable ashtray to test?” is one of the following answers (“Yes”) THEN: Jump to page 13 - Thank You!

14) How often (if ever) do you drop and leave cigarette butts on the ground?
( ) Always
( ) Often
( ) Occasionally
( ) Rarely
( ) Never
( ) Don’t know

Thank you

Thank You!

design
Easy to put into your pocket
small easy to carry
It’s very smart and looks good - very convenient due to size so fits nicely in my handbag!
Some kind of personal customisation to make it unique from others
It is a nice project
easy to use
It’s small
Nothing. It’s a fabulous little thing that helps you to be conscious about not dropping cigarettes butts on the floor
It’s small so can fit in pockets or handbags easily, no smell and no heat once the butt is inside.
It’s very environmental and easy to use. I love it!
It is a very clever idea and very useful. Definitely filling a gap in the market!
I can smoke and not have to put my butts on the floor
It’s small so can easily fit in any pocket and can easily carry it
Personalisation
It’s small and easy to carry around. Easy to clean
It’s small so can fit easily in any pocket and easy to carry
It’s a great size
It’s better for the environment
It’s portable, easy to use and small enough to fit in my pocket for easy transport.
Portable and small to fit in a pocket
Portable
Nothing
It’s very pocketable
Good size no smell left after use
Small and portable
It’s very good and extinguishes straight away, it fits in my handbag. I’ve never been a person who throws butts on the floor, but sometimes there isn’t a bin with a stubber on. I do make a conscious effort to look for a bin to discard my butts. If everyone had these there would be no need for the littering.
Convenient (easy to carry)
Easy to use and it also looks nice
It’s small and easy to use
It’s great
It’s easy to use and small
It’s a great gadget especially to have in the garden when friends come round
It’s very portable and convenient to stick in my pocket
It helps clean the area I live in and other area’s
Easy to carry, lightweight non-intrusive design
Clean design and no leakage
Maybe more solid materials
It was free. It has good potential as a lot of fines are given to smokers for cig butts.
Small and easy to carry
Good size Small
small and discreet
It's a good idea, I like it

Easy to use

Easy to use, nice design, more environmentally friendly

It's easy to use

Nothing

If I have it on me it's perfect when no ash tray bins are around, always aim to throw my cigarette butts in an environmentally friendly place so it's a great idea. Just about remembering to carry it with me when I go out

It would be good to be able to store your tobacco with it.

Handy but likely to get forgotten?

That the pouch is smell proof

That it doesn't smell

Excellent idea and stops me putting butts in my pocket. Cuts down on the smell of extinguished cigarettes. Keeps Britain Clean.

Cosmetically looked good

It pocketable. It doesn't let out a smoke smell

The ashtray helps to reduce environmental damage and is healthier for the atmosphere we live in. It's a very handy pouch that has a built in thermal layer so the cigarettes don't burn through the pouch, I would really recommend this pouch to my friends if they ever get the chance to sign up for one. In the meantime, I let them use mine!

It's handy to keep in a pocket

Easy neat and unobtrusive

That it's small so it's easy to carry around. Pocket sized and convenient

It's small and easy to fit in my pocket. Which makes it easy to use when I go out. I've used these before. They are excellent as many occasions I have had no bins to use whilst out. I don't like dropping litter or cigarette butts on the paths etc. Hence why I've always had these pouches and also a key ring ashtray that I bought from a local market. They are brilliant

Good size, easy to carry in a pocket. Seems to be reusable though I haven't cleaned mine out to reuse it yet. Great product, walked away from the stall wondering why nobody had thought of it before.

Brilliant idea, works well

The design fits in pocket well, doesn't take up too much space. Is affective for what it's for.

The portability aspect was fantastic and after every use I felt a satisfaction that I was doing a bit of good

It's very portable and easy to use

Convenience is key to the success of this product. I especially like the fact once butts are placed into the pouch they are extinguished. Furthermore they are big enough to accommodate a fair few butts.

It's very easy and convenient

Saves the dolphins

Easy to use and doesn't really smell

Low profile Slimline

It gets smelly after a while

Fit for purpose. I used to put out cigarettes and put them in my pocket. This is much better and less smelly.

There is no need to stub the cigarette butt before putting it in

Handy

I can extinguish my cigarette on the ashtray

Easy disposal of the butt

It was easy to rinse out and the fold-over top meant it didn't smell too much. It was slimline to fit in a pocket

Clean and easy to carry around
Small enough to fit in my handbag and seals well. Fireproof so not worried about the buts relighting.
Easy to empty and wipe out occasionally.
Really useful and small so can fit in my bag
A very convenient and well thought out design that fits into pockets, certainly helps prevent littering cigarette butts
Light & easy to open / close
Good design
We smoke in the garden so it’s left outside, it doesn’t get damaged by the weather, it’s easy to empty
Easy use and fits in your pocket
Everything
It’s compact and I don’t litter anymore
Convenient when I remember to take with me
It’s fab, especially for my car, no smell from mini bin, safe to use and easy to clean and reusable time after time!
Portable, don’t have to look for trash cans
Easy to carry, very portable
Good
I think it’s a great way to combat littering and as someone who has had struggles with a lack of proper disposal for cigarette ends in the past I am very pleased with my ashtray and hope they come into widespread usage.
Great for in the car
neat and tidy, discreet
It’s effectiveness and size
I don’t have to look for a place to put cigarette out, I can just pop it in the pouch and empty it later.
Small easy to carry around in my pocket The design is attractive as well
It’s portable and easy to use, doesn’t let the smell out
the texture of it, it was lightweight, I liked the minimalist design although it would be nice if it came in different colours, I would use it for chewing gum as well, it seems very space age I like that about it - I wish the name was cooler - more like a start-up
I like the size
I like that it is small and I think it is a good idea.
I like that it keeps the odours locked in and it doesn’t take up much space.
Was handy to keep around instead of throwing butts onto the floor
It was an ashtray, worked for a party
Make it bigger
Small
Very convenient
it is easy to carry with me, the size is convenient
Helps clean up the college I’m at as there’s fag buts everywhere
Small
Small and discreet colour to put in your handbag. Keeps smell locked in
Make it bigger
Easy to use
It’s easy to use
Great
Helps the environment
Easy
Portable
It’s very clean and tidy and it’s more useful
It’s good for the environment
It’s a cool thing

**Orange**

It was compact.

It was good in that it was a bright colour so easy to find in my handbag.

Besides the novelty factor it is extremely useful when out in town and you cannot find a cigarette bin.

The clip on the belt system is fully functional and hassle free.

**Disposal**

Convenient

Less conspicuous

I like how it’s like a portable bin for my cigarette butts. The clip lid means no ash or butts fall out. And it’s easy to store until needed to be emptied correctly.

I really like it. Think they are such a good idea.

Handy size

It was a nice little gadget with a belt strap, very cool.

Not much, don’t like the idea of carrying around the smell of stale cigarettes.

I like the idea of a portable ashtray more conscious of not leaving finished cigarettes around.

I received both the white plastic one and the butt saver. Preferred the butt saver as I can keep the butts without the smell escaping. The white plastic one allows smells to escape.

The pub on the pun of a butt

**Easy to use**

I don’t carry butts around. I always dispose of them in refuse bins.

Prevented me dropping my butts and causing further pollution.

**Easy to store in the pocket**

Fun colour

Handy to carry around and easy to use.

**Easy and small**

Portable, stops littering

Liked that it could easily fit inside a pocket.

It looks like a bum

The colour

Handy

Small so can fit in your pocket

It’s small so can fit in your pocket.

Love the ergonomics

good design, I like how it clips shut and don’t have to worry about it opening itself.

Good size and fairly easy to clean.

I like that it helps the environment and it fits in my bag so it’s easy to carry.

It looked nothing like an ashtray.

I don’t feel like a street littering scum bag anymore.

I can dispose of the butts when there are not any bins around.

I like it’s shape and the click it makes.

Solid, convenient with clip

I have a place where to put my rests from the cigarettes, so it’s very useful.

Nothing it’s great

It’s really easy to carry around.

The fact I can use on my dog walk and not put on the floor.

Nice click.
Compact, Easy to use, able to stub cigarette out in lid, easy to find in my handbag due to the bright colour!

<table>

</tbody>
</table>
It’s something unique

There is a reassuring click when I close the ashtray so I have no fear that it will come undone in my pocket or handbag. Additionally, it is odour free.

It’s an easy way for me to get rid of the cigarette butt.

Clean environment

The colour and how useful it is in the car

It’s easy to use and very lightweight

Convenient and it helps the environment

It was cute

It’s portable

It is small and so can be carried around easily and anywhere

It is small so can be carried easily and anywhere

The colour

It’s small and compact

Compact

It’s for family and friends that visit as I’m an ex smoker. It helps keep butts off my garden and pathways

The idea

It’s practical

It’s portable and big enough

the clip on the back is useful. small size is nice for concealing

environmentally friendly

It’s easy to work with

Somewhere to put cigarettes

I don’t have to walk around with a cigarette in my hand until I find a bin.
Blue

It's practical. Having a lighter attached is very useful and a reminder to collect the stubbed out cigarette. Compact and handy with the lighters attached.

I never leave used cigarette ends in the floor, I usually wrap them in tissue to throw away later. This devise is perfect, and will help keep our streets clean and tidy.

Portable, smart, lighter

The lighter and the small portable nature of the device
It has a lighter
Better pocket size shape
The lighter
Combined lighter
The fact that the lighter is inter granted
The integrated lighter is really great
The inter grated lighter

Love it! Can stub my butt out and put in handy bin at bottom and then not get a £100 fine for putting out on pavement if no bins around! Genius plus when lighter runs out assume I can replace?

It looks cool and quirky. It is made of thick enough material to hold the odour of the cigarette butt.

It's too big to carry around
it was small and east to keep in my bag
stopping litter of butts
I like the simplicity of the ashtray
Very handy, easy to use, cracking idea
Styled well and handy as it fits in your pocket nicely.
It's a really smart yet simple idea - so portable too
If there is no bin nearby I would throw the butt on the floor which I didn't like doing.
It's cool and easy to use
It's a little bit to fit in the pocket
All in one, compact
Bit big
It collects unsightly cigarette butts
It's a lighter too so I only have to carry one thing
Fits in my handbag and is easy to use as I don't like to drop cigarettes on the floor
small and easy to use - was worried it would smell
It is really good, lighter included is a bonus.
It was easy to carry around and was quite smell proof, I didn't feel bad like I would if I dropped a cigarette on the floor.
I always wrap my used ciggies in tissue and put in the nearest bin, but this makes it a lot easier, I can just stub it out and empty it when I've finished work.
It is good quality and fits really well in my handbag. It also doesn't smell at all and is easy to use and clean.
It's awesome
Nothing it works well
Ergonomic shape - fits in pocket
The fact it has a lighter attached is very handy
It helps prevent ash being left everywhere
Cause I don't need to through it on the floor
How small and convenient it is
easy to use

I liked how it has a lighter as well as an ashtray. I also liked how the ashtray didn’t get hot.

It’s a great size
It’s better for the environment
It’s portable, easy to use and small enough to fit in my pocket for easy transport.
Portable and small to fit in a pocket
Portable
Nothing
It’s very pocketable
Good size no smell left after use
Small and portable

It’s very good and extinguishes straight away, it fits in my handbag. I’ve never been a person who throws butts on the floor, but sometimes there isn’t a bin with a stubber on. I do make a conscious effort to look for a bin to discard my butts. If everyone had these there would be no need for the littering.

Convenient (easy to carry)

Easy to use and it also looks nice

It’s small and easy to use

It’s great

It’s easy to use and small

It’s a great gadget especially to have in the garden when friends come round

It’s very portable and convenient to stick in my pocket

It helps clean the area I live in and other area’s

Easy to carry, lightweight non intrusive design

Clean design and no leakage

Maybe more solid materials

It was free. It has good potential as a lot of fines are given to smokers for cig butts.

Small and easy to carry

Good size Small

small and discreet

It’s a good idea, I like it

Easy to use

Easy to use, nice design, more environmentally friendly

It’s easy to use

Nothing

If I have it on me it’s perfect when no ash tray bins are around, always aim to throw my cigarette butts in an environmentally friendly place so it’s a great idea. Just about remembering to carry it with me when I go out

It would be good to be able to store your tobacco with it.

Handy but likely to get forgotten?

That the pouch is smell proof

That it doesn’t smell

Excellent idea and stops me putting butts in my pocket. Cuts down on the smell of extinguished cigarettes. Keeps Britain Clean.

<tr>
<th>Cosmetically looked good</th>
</tr>
</thead>
<tbody>
<tr>
<td>It pocketable  It doesn’t let out a smoke smell</td>
</tr>
<tr>
<td>The ashtray helps to reduce environmental damage and is healthier for the atmosphere we live in. It’s a very handy pouch that has a built in thermal layer so the cigarettes don’t burn through the pouch, I would really recommend this pouch to my friends if they ever get the chance to sign up for one. In the mean time, I let them use mine!</td>
</tr>
<tr>
<td>It’s handy to keep in a pocket</td>
</tr>
<tr>
<td>Easy neat and unobtrusive</td>
</tr>
<tr>
<td>That it’s small so it’s easy to carry around  Pocket sized and convenient</td>
</tr>
<tr>
<td>Its small and easy to fit in my pocket. Which makes it easy to use when I go out. I’ve used these before. They are excellent as many occasions I have had no bins to use whilst out. I don’t like dropping litter or cigarette butts on the paths etc. Hence why I’ve always had these pouches and also a key ring ashtray that I bought from a local market. They are brilliant</td>
</tr>
<tr>
<td>Good size, easy to carry in a pocket. Seems to be reusable though I haven’t cleaned mine out to reuse it yet. Great product, walked away from the stall wondering why nobody had thought of it before.</td>
</tr>
<tr>
<td>Brilliant idea, works well</td>
</tr>
<tr>
<td>The design</td>
</tr>
<tr>
<td>fits in pocket well, doesn’t take up too much space. Is effective for what it’s for.</td>
</tr>
<tr>
<td>The portability aspect was fantastic and after every use I felt a satisfaction that I was doing a bit of good</td>
</tr>
<tr>
<td>It’s very portable and easy to use</td>
</tr>
<tr>
<td>Convenience is key to the success of this product. I especially like the fact once butts are placed into the pouch they are extinguished. Further more they are big enough to accommodate a fair few butts.</td>
</tr>
<tr>
<td>It’s very easy and convenient</td>
</tr>
<tr>
<td>Saves the dolphins</td>
</tr>
<tr>
<td>Easy to use and doesn’t really smell</td>
</tr>
<tr>
<td>Low profile  Slimline</td>
</tr>
<tr>
<td>It gets smelly after a while</td>
</tr>
<tr>
<td>Fit for purpose. I used to put out cigarettes and put them in my pocket. This is much better and less smelly.</td>
</tr>
<tr>
<td>There is no need to stub the cigarette butt before putting it in</td>
</tr>
<tr>
<td>Handy</td>
</tr>
<tr>
<td>I can extinguish my cigarette on the ashtray</td>
</tr>
<tr>
<td>Easy disposal of the butt</td>
</tr>
<tr>
<td>It was easy to rinse out and the fold-over top meant it didn’t smell too much. It was slimline to fit in a pocket</td>
</tr>
</tbody>
</table>
clean and easy to carry around
Small enough to fit in my handbag and seals well. Fireproof so not worried about the butts relighting. Easy to empty and wipe out occasionally.

Really useful and small so can fit in my bag

A very convenient and well thought out design that fits into pockets, certainly helps prevent littering cigarette butts

Light & easy to open / close

Good design

We smoke in the garden so it’s left outside, it doesn’t get damaged by the weather, it’s easy to empty.

Easy to use and fits in your pocket

Everything

It's compact and I don’t litter anymore

Convenient when I remember to take with me

It’s fab, especially for my car, no smell from mini bin, safe to use and easy to clean and reusable time after time!

Portable, don’t have to look for trash cans

Easy to carry, v portable

Good

I think it’s a great way to combat littering and as someone who has had struggles with a lack of proper disposal for cigarette ends in the past I am very pleased with my ashtray and hope they come into widespread usage.

Great for in the car

neat and tidy, discrete

It’s effectiveness and size

I don’t have to look for a place to put cigarette out, I can just pop it in the pouch and empty it later.

Small easy to carry around in my pocket The design is attractive as well

It’s portable and easy to use, doesn’t let the smell out

the texture of it, it was lightweight, I liked the minimalist design although it would be nice if it came in different colours, I would use it for chewing gum as well, it seems very space age I like that about it - I wish the name was cooler- more like a start-up

I like the size

I like that it is small and I think it is a good idea.

I like that it keeps the odours locked in and it doesn’t take up much space.

Was handy to keep around instead of throwing butts onto the floor
| It was an ashtray, worked for a party |
| Make it bigger |
| Small |
| Very convenient |
| it is easy to carry with me, the size is convenient |
| Helps clean up the college I’m at as there’s fag buts everywhere |
| Small |
| Small and discreet colour to put in your handbag. Keeps smell locked in |
| Make it bigger |
| Easy to use |
| It’s easy to use |
| Great |
| Helps the environment |
| Easy |
| Portable |
| It’s very clean and tidy and it’s more useful |
| It’s good for the environment |
| It’s a cool thing |
| smaller |
| Minibin is the best one. flat, contains smell ash and heat |
| Small size/weight. Ease of use. |
| It is really useful for carrying my cigarette butts to the nearest bin |
| Great product |
| It stopped the ash and fags going onto the floor |
| That’s is portable |
| It’s easy to use and I can take it with me anywhere |
| It’s portable and its environmentally friendly |
| fits into you handbag |
Orange

Wasn’t sure about the look!

Not much the design could be improved if it had a thing to stub cigarette on - didn’t like to try it in case orange container melted

Different colours and made of metal.

Have a metal strip or similar material attached inside the lid to make it easier to put out cigarettes without chances of melting the plastic container itself.

Nothing

Shouldn’t be carried round, should focus on putting more public places to dispose of cigarettes

It could be bigger slightly, its also quite fiddly to open and at one point I ended up spilling the contents out when trying to open it.

Better if it also had a facility, like the white plastic one, to stub out the cig. butt.

The colour it’s to bright a more subtle colour

Nothing

- A fraction larger

Nothing

Maybe a little bigger

More eco friendly as it’s plastic. The clip isn’t big enough to clip onto anything. Doesn’t seem particularly robust.

Make it smaller

Nothing, it’s perfect

Be able to clip to a car vent so can easily put cigarette buts in while driving But just be fully smell proof!

I would like it to be bigger

I wouldn’t change a thing

Nothing much

More colours

Slightly bigger

Probably provided with a smell also, I’ve modified a little my own ashtray.

I rested my cigarette on the ashtray and it burnt through and it made a terrible burning plastic smell

I left a cigarette in the ashtray and it burnt a hole so I would make it more durable

Make sure its seal proof.....

Maybe extra smell proofing as old fag butt odour isn’t a good look

Slimmer

maybe a wider range of colours

Possibly a variety of sizes and colours, to make it more appealing for the consumer.

Maybe a better range of colours so they could become more of a fashion accessory as it might encourage more smokers to use them.

nothing

Didn’t feel the need for the clip (I wouldn’t put out a cig that close to my clothing, nor would I carry the smell like that, I prefer to put it in a pocket)

It should be a bit bigger. Also its not so easy to open. Once I opened it and the contents spilled out covering my hand in ash.

Nothing

Be able to clip to a car vent for use when driving

Nothing
I would make it a bit bigger
Maybe offer different colours
Colour more subtle pale colour
Nothing really
maybe size variations
Make it slightly taller.

Doesn't need to be orange. Makes it appealing to children.

size of opening - I was worried it was too small and I would burn my fingers=if you are supposed to stub out on the lid then close it then the ash would go everywhere defeating the object
Fireproof
Smaller

Maybe the colour
Not much - it is functional which is what matters
Different colour
A bit bigger
Nothing
Nothing
Nothing
Bigger
Nothing
Nothing
the colour
rounder
Different colours Blue
nothing

If it gives out a smell
Possibly the colour, but that's just a cosmetic change.

No it works well.
Make it bigger

make it neon pink or orange
Make it have storage for rizla papers
Nothing
Nothing
Nothing
Nothing
Nothing
Nothing

Smell proof
Nothing
Nothing

maybe make it look less obvious/conspicuous
personalisable
Nothing
Nothing
Nothing
Nothing, it's fine.
